

REPRO-HANDBUCH PROCESS LENS MANUAL

Apo-Gerogon/ Apo-Gerogon S/ Apo-Graphigon

Diese Objektivtypen sind für den Einsatz in Kompaktkameras konstruiert. Aufgrund der geringen Abstände zwischen Vorlage und Film sind hier große Bildwinkel erforderlich. Das sechslinsige Apo-Gerogon hat einen Bildwinkel zwischen 70° und 78° . Es wird in Brennweiten zwischen 135 und 360 mm geliefert, die Anfangsöffnung ist 1:9, die Arbeitsblende 22. Der Maßstabsbereich geht von 1:5 bis 5:1. Die Blende ist linearisiert und mit einem Blendenhebel (als Zubehör) können die Blendenwerte entweder auf am Gerät angebrachten Blendenskalen oder mit Hilfe von Zeigerelementen abgelesen werden. Das Apo-Gerogon S hat einen Bildwinkel von 75° . Es wird ausschließlich mit 270 mm Brennweite angeboten. Anfangsöffnung und Arbeitsblende sind mit dem Apo-Gerogon identisch. Der Maßstabsbereich geht von 1:3 bis 3:1. Das Apo-Graphigon verfügt über einen 78° Bildwinkel, was den Bau sehr kleiner Kameras ermöglicht hat. Selbst bei voller Ausnutzung dieses Nennwinkels fällt die Qualität auch in den Formatecken nicht ab. Der Maßstabsbereich erstreckt sich ebenfalls von 1:3 bis 3:1.

Apo-Gerogon/ Apo-Gerogon S/ Apo-Graphigon

These lens systems are envisaged for use in compact process cameras where the short original-to-film distance calls for wide angles of coverage. The six-element Apo-Gerogon covers between 70° and 78° and is available in focal lengths from 135 mm to 360 mm. The maximum aperture is $f/9$, the working aperture $f/22$. The reproduction scale range extends from 1:5 to 1:1. The aperture scale is linear and accessory aperture levers permit apertures to be read either on the camera's aperture scales or with the aid of additional pointers.

The Apo-Gerogon S covers a 75° angle; there is only one focal length of 270 mm. The maximum and working apertures are the same as for the Apo-Gerogon. Recommended reproduction scales run from 1:3 to 3:1. The Apo-Graphigon covers a 78° angle and thus allows the design of particularly compact cameras. The lens maintains quality all the way to the image corners over the full nominal angle. The scale range is again 1:3 to 3:1.

Apo-Gerogon, Apo-Gerogon S, Apo-Graphigon
