Factory Alignment Specification of normal SIACP

For MT5362 serial

Version：V0.2

For the following Chassis：

MT62L:A mini edition of MT62B

MT62S: MT62B + MS6M20(MEMC module) for super slim LCD

MT62F:A full function edition of MT62B

PREPARED BY : Wei Lin DATE : 2010-04-16

APPROVED BY : DATE :

Disclosure

The information contained in this document is proprietary to TCL SZ FPD lab and shall not be disclosed by the recipient to third persons without the written permission of the team leader or GM of R&D.

Revision History

Status, Ver	Date, Drafter	Description of changes
V0.10	2010-02-07	This is the first version of normal SIACP • HDMI as the main absolute input • The password of factory menu is 9735
V0.20	2010-04-14	• Upgrade specs for High Pot. and Insulating Resistance Tests • Upgrade USB upgrade SW method

These chassises are designed for European LCD TV with MPEG4. The main chip is from Mediatec (MT5362 series) and supports below inputs and outputs:

class	item	MT62L	MT62S	MT62F	
input & output	**ATV** (PAL B/G D/K I, SECAM B/G D/K L/L)	√	√	√	
	DTV (DVB-T,DVB-C,DVB-S)	DVB-T	DVB-T DVB-C	DVB-T DVB-C DVB-S	
	HDMI (480i/p, 576i/p, 720p up to 1080i/p, compliant v1.2. with HDCP)	2	5	3	
	VGA		√	√	
	VGA/DVI audio	√	Share with CMP	√	
	CMP (YPrPb can support from 480i up to 1080p,audio)	√	√	√	
	SCART1 (CVBS & RGB,audio)	√	√	√	
	SCART2 (CVBS & YC,audio)				
	Side AV or back AV (CVBS,audio)			Back AV	
	USB player (picture,video,audio)	Picture	Picture, Video, audio	Picture, Video, audio	
	SCART1 output (CVBS,audio)	√	√	√	
	SCART2 output (CVBS,audio)				
	Headphone output			√	
	SPDIF output	Coaxial	Optical	Coaxial	
function	**MEMC**		√		
	CI+		√	√	
Others	**Serial connector**	P5	P16	P3	
	I2C connector of MEMC module		PM3		

Serial connector of MT5362 definition:

Pin1:VCC Pin2:RXD Pin3:TXD Pin4:GND

I2C connector of MEMC definition:

Pin1:VCC Pin2:GND Pin3:SCL Pin4:SDA

INFO:

↳ All tests and measurements mentioned hereafter have to be carried out at a normal mains voltage (**220 ~ 240 VAC**)
↳ All voltages have to be measured with respect to ground, unless otherwise stated
↳ All final tests have to be done on a complete set including LCD panel in a room with temperature of **25+/-7°C**
↳ The White Balance (color temperature) has to be performed into subdued lighted room after at least **1 hour** of warm-up/burn-in. This is applicable for both Alignment and Picture Performance evaluation at OQA in order to be set free of any temperature drift (colorimetry vs time)

1. Electrical Assembly Alignment

1.1. *Preconditions – DC/DC Check*

Before power on, please check the board according to the relevant block diagram and circuit diagram, and make sure that no serious error should destroy the board. For example,the output of DC/DC and LDO should not shorted to ground.

Supply a suited voltage and power on , then check the voltage according to the relevant block diagram , circuit diagram and voltage spec . the error should less than 5% .For example, the voltage for main chip(DV33, AV33,DV18,DV11,etc.), the voltage for DDR (DDRV) , the voltage for amplifier(AUDIO_PWR),etc. Only the standby voltage is necessary if there is no software in the flash .

1.2. *SW download*

Download the latest release MT62_SW into the flash using MTK SW tool. See Appendix❷ "**How to download FLASH SW**". Or upgrade the SW from USB port See Appendix❸**" How to upgrade FLASH SW from USB"**.

Download the latest release MEMC_SW (skip this step if no MEMC module on the chassis). See Appendix❻ "**How to download FLASH SW for MEMC module**".

1.3. Panel ID check and modify

There is different ID stored in the NVM depended on different Panels. Modify it with Hyper terminal if the initial ID or a wrong ID make the set can not display clearly. See Appendix❺. It can be checked and modified in **Factory menu**->**Feature**->**Panel ID** if the set can display clearly . The set should be restart if the panel ID is changed .

1.4. Functional Test

Once the boards (chassis, KB, IR, PSU…) and the panel are well interconnected, connect all external generator devices to relevant inputs/outputs below according to their respective test patterns format and check picture content and sound quality accordingly:

Source	**Test signal** (generator)	**Test pattern** (format/image)
Analog /Digital Tuner	RF cable	Full Band (VHF/UHF) + CATV DVB-T
Composite(CVBS)	Chroma/Fluke	PAL Half Color & Gray bars
SCART1 (CVBS) SCART1 (RGB)	Chroma/Fluke	PAL Half Color & Gray bars Half Color & Gray bars
SCART2 (CVBS) SCART2 (Y/C)	Chroma/Fluke	PAL Half Color & Gray bars
VGA	Chroma/QuantumData	1024x768@60Hz

		Half Color & Gray bars
CMP (YPrPb)	Chroma/QuantumData	1080i@60Hz Half Color & Gray bars
HDMI	DVD with HDMI compliancy	Movie 720p@60Hz
Headphone	RF cable	First channel
Loud Speakers	RF cable	First channel
SCART1 (CVBS out)	RF cable	First channel
SCART2 (CVBS out)	Chroma/Fluke	PAL Half Color & Gray bars

Audio tones can be defined by the factory (ie: 1KHz & 3KHz, sweep, …).
Picture video formats can be changed by the factory according to their own standard.

1.5. ADC Calibration

To ensure the ADC performance, the error of "generator+cable" must be less than 2%. The following inputs require an ADC calibration for the time being.

- **VGA**(skip this step if no VGA input on the chassis)

Provide a test signal **1024×768@60Hz** with **WhiteBlack squares**.

Select the corresponding **FactoryMenu**-> ***ADC Calibration***-> **Auto Color** , then press "**OK**" key on RemoteControl to start. Value of status will change to "**OK**" if succeed.

- **CMP**

Provide a test signal **720p@60Hz** with **100% 8 steps ColorBar**.

Select the corresponding **FactoryMenu**-> ***ADC Calibration***-> **Auto Color** , then press "**OK**" key on RemoteControl to start. Value of status will change to "**OK**" if succeed.

- **Scart RGB**

Provide a test signal **PAL 576i** with **100% 8 steps ColorBar**.

Select the corresponding **FactoryMenu**-> ***ADC Calibration***-> **Auto Color** , then press "**OK**" key on RemoteControl to start. Value of status will change to "**OK**" if succeed.

The mean of status value:

"**NONE**"**=** no input is successful in ADC calibration.

"**OK**"**=** current input is successful in ADC calibration.

"**NOK**"**=** current input is fail in ADC calibration.

"**ALL**"**=** all inputs required are successful in ADC calibration.

R Gain, G Gain, B Gain, R Offset, G Offset, B Offset in **FactoryMenu**-> ***ADC Calibration page*** can be fine-tuned if necessary but not required.

1.6. DDC & EDID Test

The E-EDID data structure are according to VESA Enhanced EDID 1.3 (and EIA/CEA-861B for HDMI).

Both VGA and HDMI have their own separate bin files:

For EDID check, it's needed to check whether the correct EDID is downloaded by checking corresponding EDID NVM Checksum or read them out to check bit by bit if it is in line with the released EDID bin file.

1.7. HDCP Test

For HDCP compliancy, it's needed to check whether the HDCP key has been well set.

1.8. CI+ Key activation and test(This step is only for the models with CI+ function)

Select factory menu-> **Update CI+ Credential**-> **Update CI+ Credential** , then press "**OK**" key on RemoteControl to active the CI+ KEY. The Valid(CI+ state) state turn to "Yes" and Cus Code(Custom Code), Serial Num display if succeed. Download the CI+ Key and try to active it again if fail.

2. Final Assembly Alignment

2.1. FactoryMenu

Follow the below steps to pop-up the Factory Menu in case of "**FactoryKey**" is disable:
- press RemoteControl key "**MENU**" to display main menu
- Select "Picture" and press "**OK**" key to enter the picture submenu
- Select "Contrast" item
- press the subsequence RemoteControl keys "**9**", "**7**", "**3**" and "**5**"

Press RemoteControl key "**Blue**" To pop-up the Factory Menu in case of "**FactoryKey**" is enable.

The status of "**FactoryKey**" can be changed in **FactoryMenu**->**System**-> **FactoryKey**

Press RemoteControl "**OK**" key or "**RIGHT**" key to enter the submenu.
Press RemoteControl "**Menu**" key to go back to the root menu.
Press RemoteControl "**RIGHT**"or "**LEFT**" key to change the values.
Press RemoteControl "**OK**" key run the function.
Press RemoteControl "**Exit**" key exit the factorymenu.

2.2. Entering to "P" Mode

Turned on the factory key to enter into "P" mode.The TV will display "P" in bottom left corner in "P" mode.

2.3. White Balance Alignment

Make sure that the picture mode is **"vivid**", enter to **"P" mode**(turned on the factory key) and **switch off** "**Pic. Enhance**" in **Factory Menu**-> **WD Alignment** before white balance alignment .

VGA,**CMP**,**SCART RGB**,**DTV**,**CVBS_PAL** Color Coordinates are relative to HDMI.

CVBS_SECAM and **CVBS_NTSC** Color Coordinates are relative to CVBS_PAL.

Warm and **Cool** Color Coordinates are relatives to **Normal** mode.

Only **HDMI(YUV 720p@60Hz)** input requires color temperature adjustment. **All the Relative Matrix Offsets** should be set while doing alignment.

- **Expected Targets and Tolerances**

The measured parameters should be "x, y" coordinates.

The White Balance alignment should be performed using a contact less analyzer (ei: Minolta CA-210). The analyzer may not touch the screen surface, and measurement must be performed in a

dark environment keeping the probe(s) at 90+/-2° from the panel.

The result should measure up the relevant spec.

The alignment have to fulfill the requirements in Application Form.

- **Alignment FlowChart**

Provide a test signal on the input and align the WB as described inside attached document ensuring first that the BackLight value is matching below table:

MTK_EuroAlignmentFlowchart.doc

2.4. High Pot. and Insulating Resistance Tests

At the end of the process, a High Pot. and an Insulating Resistance tests are required for matching Safety Electrical requirements (ei: xxxx)

- **High Voltage Withstanding requirements**

- "Voltage" ⇨ **3500 VAC**
- "Max Leakage Current" ⇨ **10 mA**
- "Test Time" ⇨ **5 sec**

- **Insulating Resistance requirements**

- "Voltage" ⇨ **DC500V**
- "Threshold Max" ⇨
- "Threshold Min" ⇨ **4MΩ**
- "Test Time" ⇨ **3 sec**

3. Factory default settings

Do the "Reset shop" before packing.The detail of reset shop follow OOB setting.

"Factory Menu" Definition

1). System

Item	Sub-item	Value	Note
System	Factory Key	Off/On	OFF: hotkey is invalid ON : hotkey(blue key) is availability
	Power Mode	Boot/Standby/ Last Status	Boot: Enter power on mode Standby: Enter standby mode Last Status: power on according to last status
	Burning Mode	Off/On	Select panel On with left/right key, Press "EXIT" key to enter the burning mode; Press "Menu" key on keyboard to exit the burning mode
	Pre-Frequency Poland	Run	Press "OK" key to run
	Pre-Frequency Huizhou	Run	Press "OK" key to run
	Pre-Frequency Thailand	Run	Press "OK" key to run
	Reset User		Clear date of NVM in user menu,except the value of language / related installation/Factory setting,then set to the default value.
	Reset All		clear NVM values，and set to default value。
	Reset Shop		Clear date of NVM in user menu,include the value related installation,and Clear date of factory menu except the item of Balance and sound ,set to default value

2). Feature

Item	Sub-item	Value/Sub-item	Note
Feature	FleshTone	Off/On	
	Adaptive Luma Control	Off/On	
	Light sensor	Off/On	Some models have have no this feature.
	Adaptive Backlight	Auto/Low/Mid/High (it should be "On/Off " in 26 inch and smaller ones)	Set the backlight mode
		Backlight Low	Set the backlight value of Low mode
		Backlight Mid	Set the backlight value of Mid mode
		Backlight High	Set the backlight value of High (or Off) mode
		ADP low control point	Set the low point in dynamic backlight control curve
		ADP mid control point	Set the mid point in dynamic

			backlight control curve
		ADP high control point	Set the high point in dynamic backlight control curve
	White Peak Limitator	Off/On	
	TunerAGC	-44~127	
	Project ID	ID	Select panel ID with left/right key, restart the set to take effect.

In MT62F and MT62S chassises:

There is no "Adaptive Backlight" item, "Auto/Low/Mid/High" "Backlight" "ADP low control point" "ADP mid control point" "ADP high control point" are in the "feature" page. There is only "Backlight" item instead of "Backlight Low" "Backlight Mid" "Backlight High". It set the backlight value of current backlight mode.

3). ADC Calibration

Item	Sub-item	Value	Note
ADC Calibration	Source	HDMI,etc	VGA\CMP\scart RGB require Calibration
	Auto color	Run	Press "OK" key to run
	Status	NONE / NOK / OK / ALL	NONE:No source has been calibrated NOK:Current source hasn't been calibrated OK: Current source has been calibrated ALL:All sources have been calibrated
	R Gain		For fine tune ADC manually.
	G Gain		
	B Gain		
	R Offset		
	G Offset		
	B Offset		

4). WD Alignment

Item	Sub-item	Value	Note
WD Alignment	Pic. Enhance	ON/OFF	Press "Right" key to switch off all of the items in the feature submenu. This should be done before white balance alignment. If it's off, the way to switch it on is to reset user/shop or set on the features in Feature sub-item manually.
	Source	HDMI,etc	For balance source: HDMI,VGA,DTV,PAL,SECAM,NTSC,Scart RGB,CPM, HDMI
	Color Temperature	Normal /Warm/Cool	The value of Warm and cool is the offset of Normal mode.
	R Gain		R White balance
	G Gain		G White balance

	B Gain		B White balance
	R Offset		R Gray balance
	G Offset		G Gray balance
	B Offset		B Gray balance
	Scaling Brightness		
	Scaling Contrast		
	Scaling Saturation		
	Auto phase	Run	Press “OK” key to adjust the signal to avoid the ripple in CMP source, it is not necessary.

5). Sound

Item	Sub-item	Value	Note
Sound	VOL_0	0	
	VOL_10	5	
	VOL_50	20	
	VOL_90	145	
	VOL_100	255	

6). Version info

Item	Sub-item	Value	Note
Version info	Project:	***	
	Panel:	***	
	MT62 Ver:	***	
	Date:	***	
	MCU Ver:	***	

7) . Factory Clone& User Clone (MT62S,MT62F have no this function now)

Select “Factory Clone” in the factory menu to ernter the factory clone menu

Item	Sub-item	Value	Note
Fac Clone	TV TO USB(Factory)	DO	Press “Right” key to copy the data(WB,ADC,picture setting,etc) to USB
	USB TO TV(Factory)	DO	Press “Right” key to set the data(WB,ADC,picture setting,etc) from USB

Enter another password “6” “4” “0” “5” in “menu” -> “picture” -> “contrast” status to ernter the user clone menu

	Value	Note
TV TO USB(user)	DO	Press “Right” key to copy the data(channel map,picture setting,etc) to USB
USB TO TV(user)	DO	Press “Right” key to set the data(channel map,picture setting,etc) from USB

8) . Update CI+ Credential (only for the chassises with CI+ function)

Item	Sub-item	Value	Note
Update CI+ Credential	Update CI+ Credential	DO	Press “OK” key to active the CI+ KEY
	Update from USB	DO	Press “OK” key to download the CI+ KEY from USB
	Erase CI+ Credential	DO	Press “OK” key to erase the CI+ KEY
	Valid		Show the CI+ state
	Cus Code		Show the CI+ custom code
	Serial Num		Show the CI+ serial number

Appendix ❶ "How to download MCU SW"

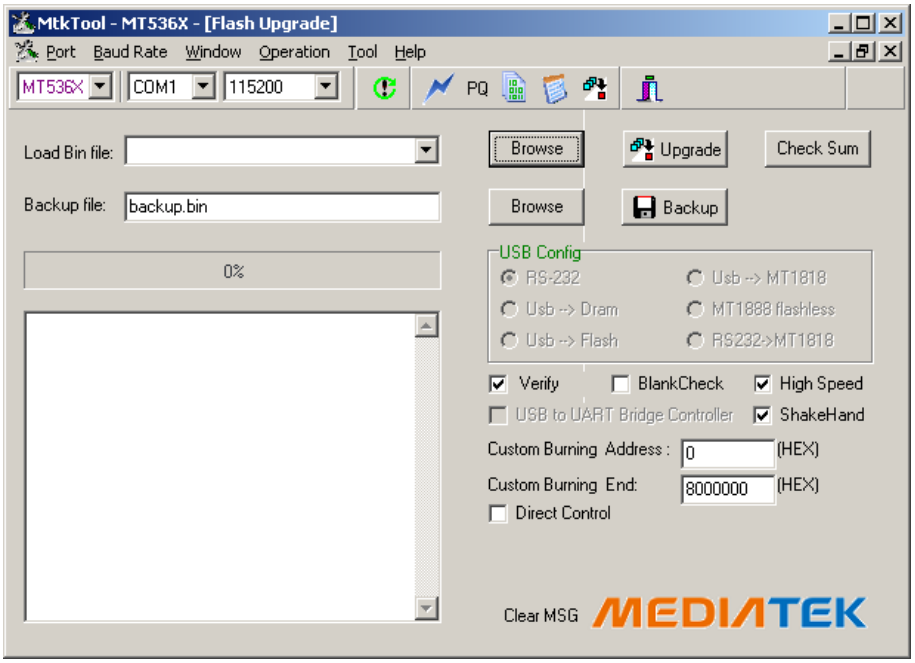
Prepare WT_MCU_ISP SW tool for update.

1. Connect the PC to the serial connector on board using a special serial device(USB or COMx).
2. Provide the a correct voltage to the board.
3. Start "Weltrend MCU ISP.exe" and download the MCU SW. (please see file *Visio-ISPToolGuide_ver090.pdf)*

Appendix ❷ "How to download FLASH SW"

Prepare MTK SW tool for update.

1. Connect the PC to the serial connector on board using a special serial device (USB or COMx).
2. Provide the a correct voltage to the board
3. Start "**MTKTOOL.exe**" application under MTKxx folder, and set the parameters as below picture(notice:select MT836X chassiss):



4. Press "Browse" button to select the corresponding SW bin file to upload
5. Press "Upgrade" button to start downloading the SW and wait the gauge displayed "100%" that means the SW has been successfully downloaded.
   In the meanwhile, all operations such erasing flash and so… are parsed into the debug window script.
6. Once the SW is downloaded, switch-off/on the chassis board and wait few seconds for eeprom update.

See Appendix❸" **How to upgrade FLASH SW from USB"**

Upgrade with loader:

1. Save the new software file(*.pkg) in the root directory of USB, and modify it's name as upgrade.pkg.
2. Plug in the USB when TV set is "power off" or "standby" (TV set should be on "standby" status if using a touch sensing keyboard).

3. Press down “power” key on keyboard, power on if it is on “power off” status , release the “power” key 2~5 second later , the LED on IR board will flash after upgrade begin, the TV set will start up if upgrade succeed.The LED is on but no flash if upgrade fail,check the set and try again.

Upgrade without loader(The TV set should be able to display normally):

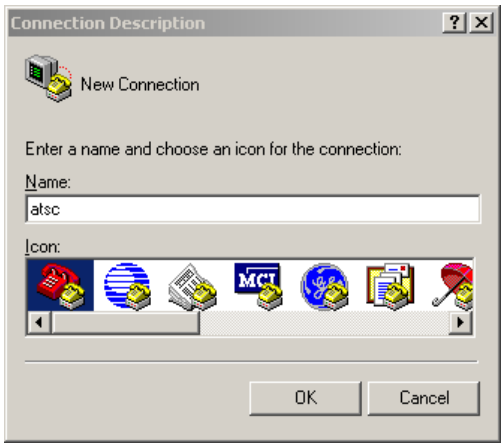
1. Save the new software file(*.pkg) in the root directory of USB, and modify it’s name as upgrade.pkg.
2. Plug in the USB.
3. Upgrade the SW follow the indication display on the screen

Appendix ❺ “Modify panel ID with Hyper terminal”

①. Connect the PC to the board using a special serial device (USB or COMx).
②. Provide a correct voltage to the board
③. Save the password file “password for hyperTerminal.txt” to your computer.

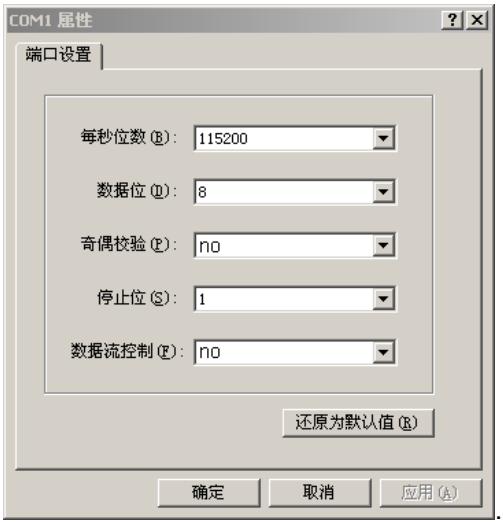
D:\MT62\调试说明\
已发布\password f

④. Start HyperTerminal “HyperTrm.exe” in your computer.
⑤. Fill the name.



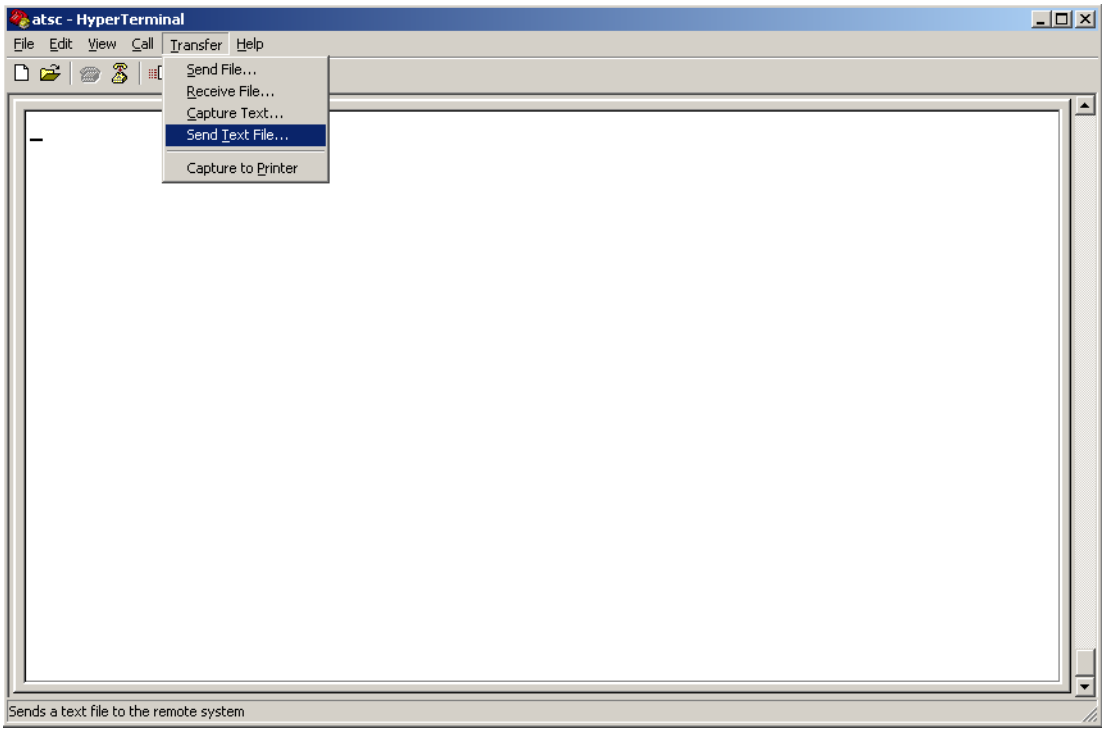
⑥. Select the Com Port you are using.

⑦. Set the items as below picture.

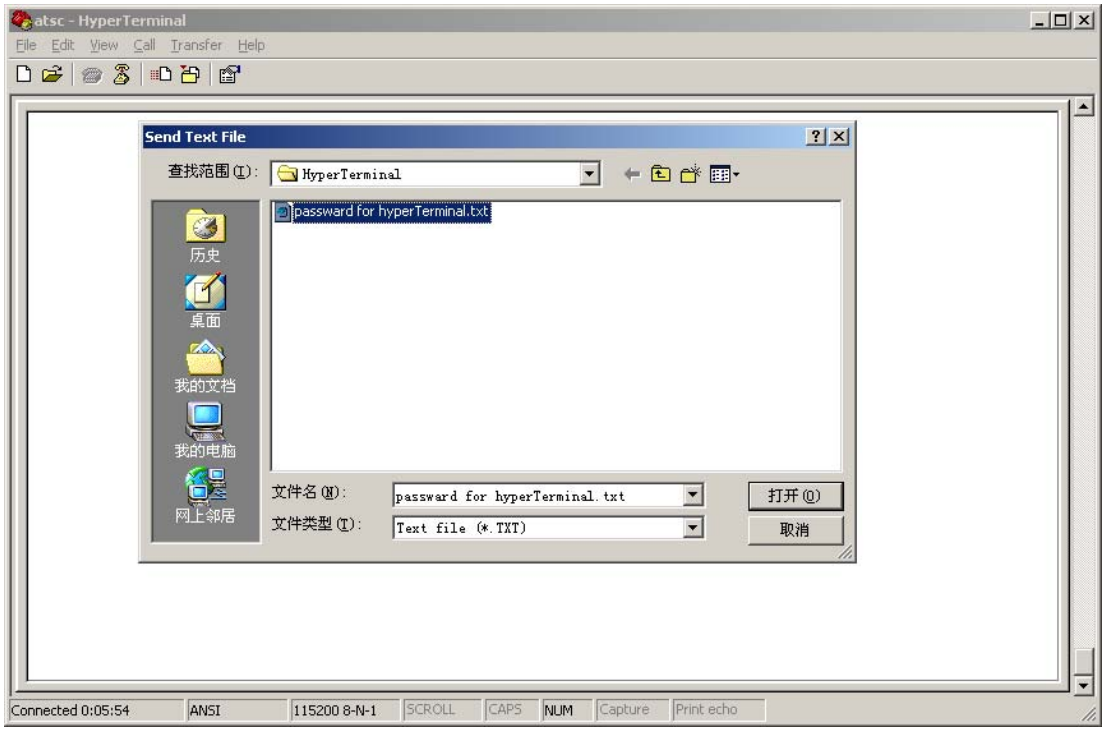


Select “File->Save->” to Save the setting. Then start HyperTerminal “atsc.ht” in your computer instead of step ③ to ⑦ later

⑧. Send the password.

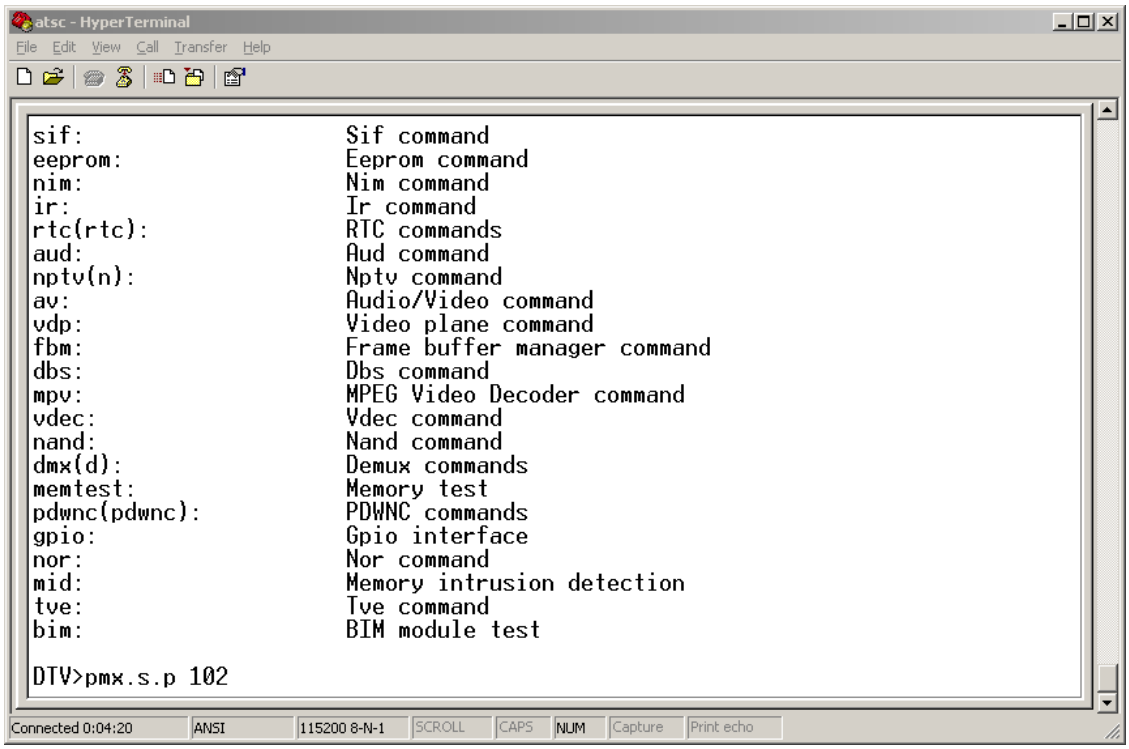


⑨. Select the password file saved in your computer.

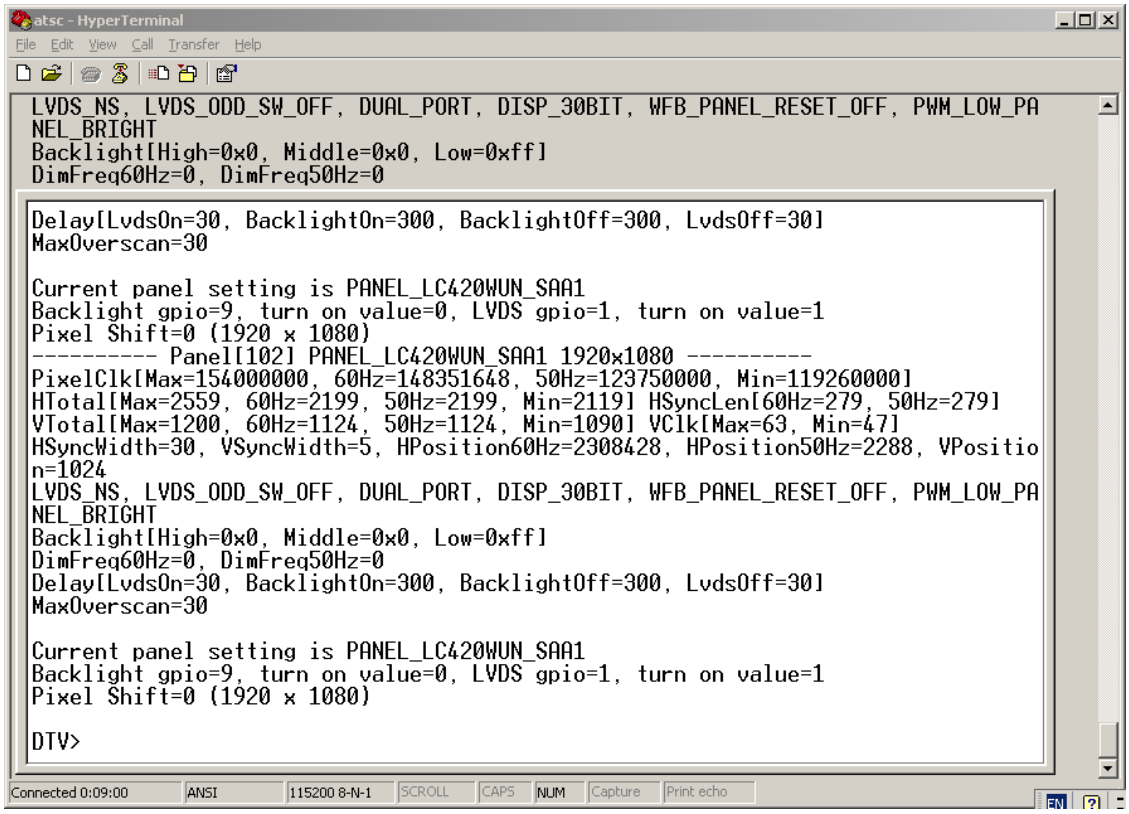


⑩. Under the folder “DTV>” enter “pmx.s.p +ID”,e.g.: pmx.s.p 102

See the panel ID in another document <Panel list for MT62>.



⑪. Press “Enter”, the panel signal will be printed in the window

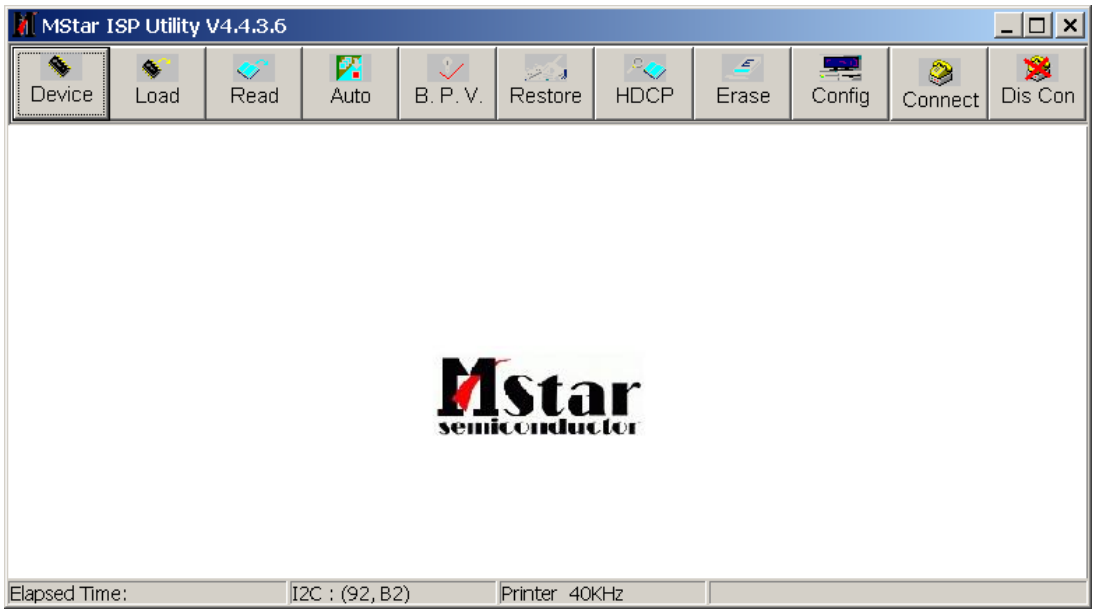


Appendix ❻ "How to download FLASH SW for MEMC module"

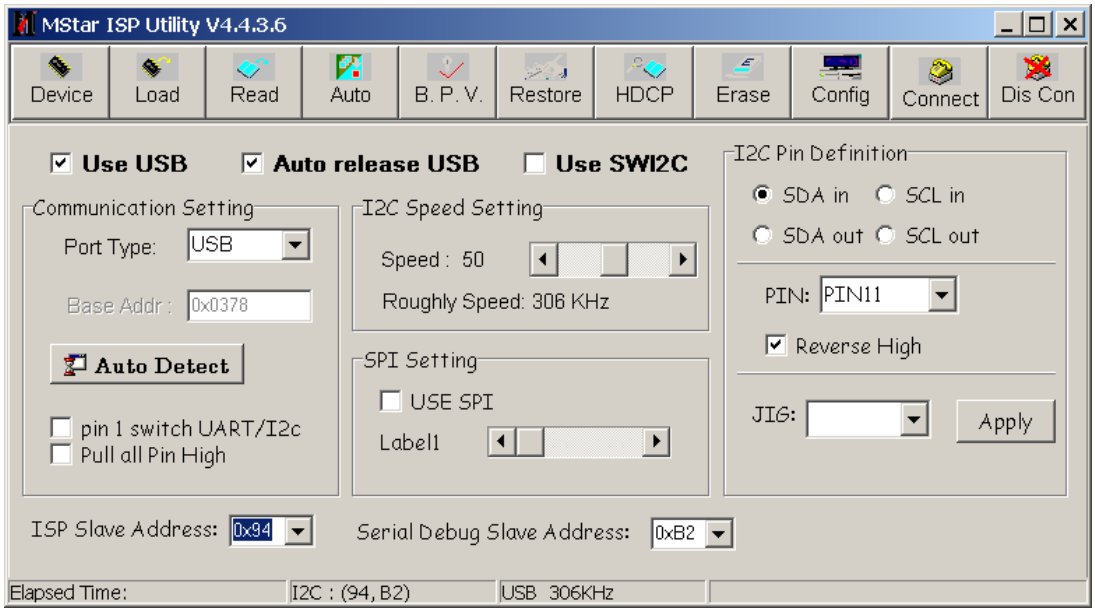
Prepare MSTAR SW tool for update:

- Install the driver:CDM_Setup.exe
- Save the MS_TV folder to your PC,

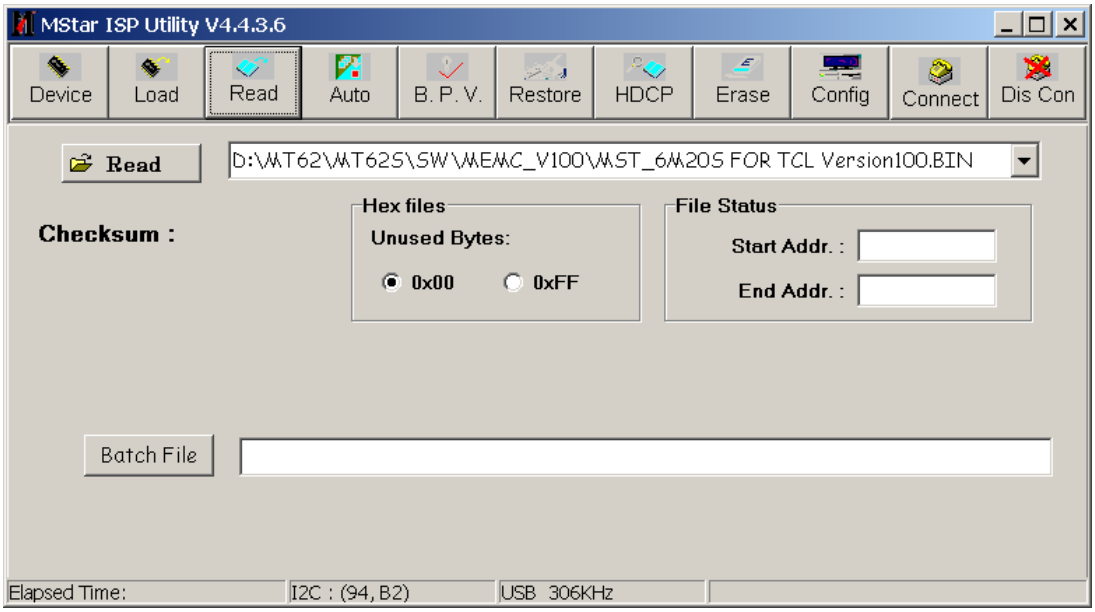
1. Connect the PC to the I2C connector on board using a special I2C device (USB or COMx).
2. Provide a correct voltage to the board.
3. Start "**ISP_Tool.exe**" application under MS_TV folder:



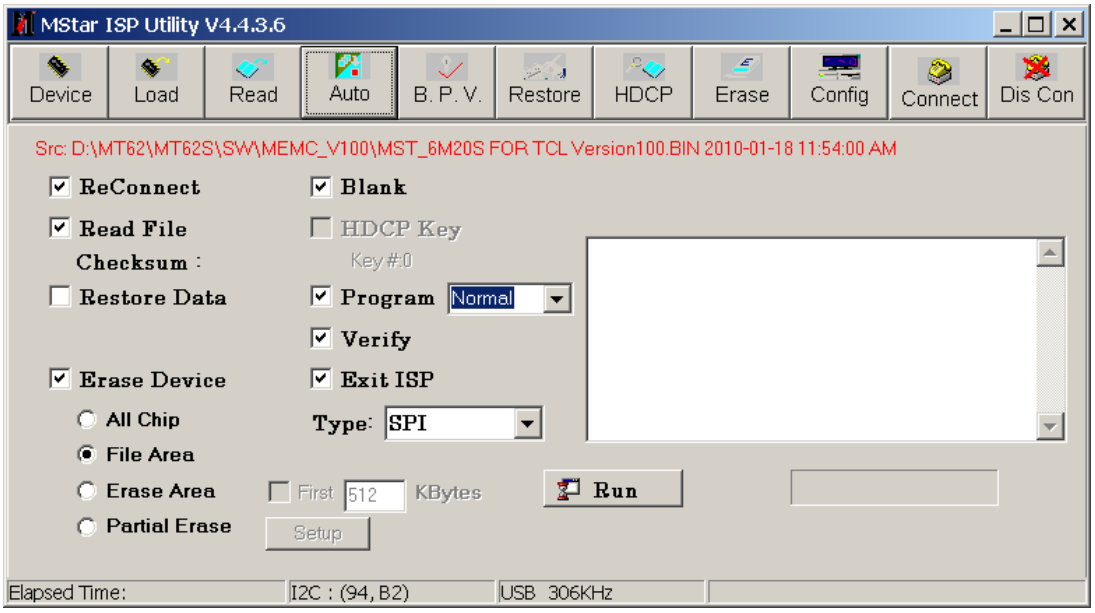
4. Press "config" button On the Menu to enter the corresponding page, change the ISP slave address to "0x94" and confirm that if the Port Type is correct, correct it if not.



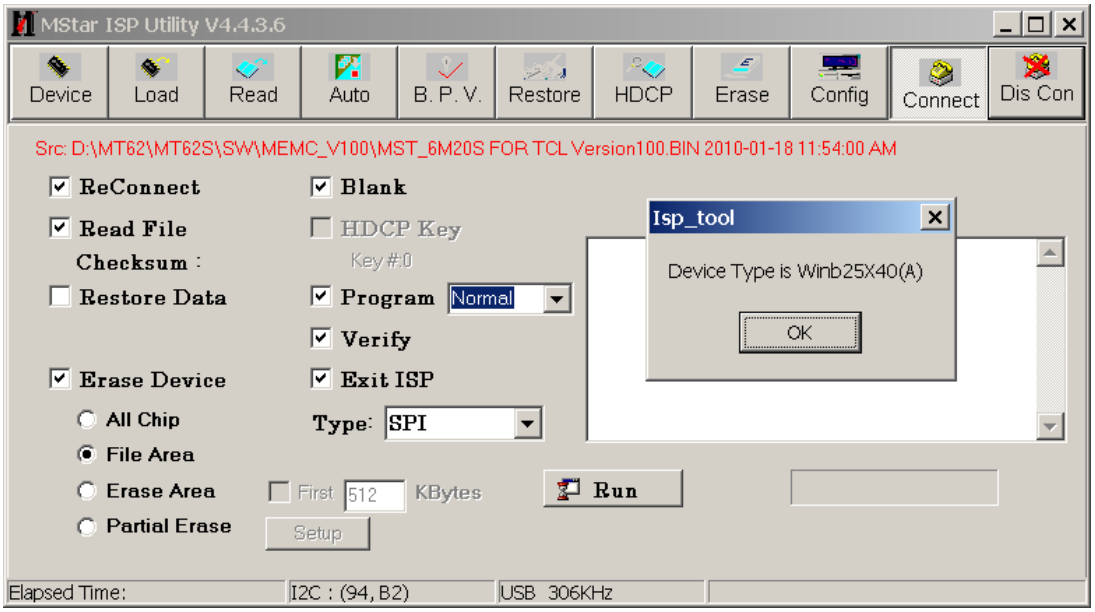
5. Press “Read” button on the Menu to enter the corresponding page and Press “Read” button on this page to load the software(*.bin) on your PC



6. Press “Auto” button on the Menu to enter the corresponding page



7. Press “Conect” button on the Menu. A message will popup to tell you the result. Press “OK” button to close the message. If fail to connect with “Can’t find the Device Type!! ” Message ,Check the hardware and parameters setting of the ISP_Tool , Press “Dis Con” button , then “Conect” button again, until it identify the flash memory IC.



8. Press “Run” button in the current page to download the software.”Pass” will display on the right bottom corner if succeed.
