2,4 Qualité du code

- L'analyse des 5 pages a généré 96 erreurs et 82 mises en garde.
- Aucune page n'est conforme aux normes W3C. Les erreurs qui entachent le code risquent d'empêcher certains navigateurs de les interpréter (et donc de les afficher) correctement.
 - ✎ Corrigez les erreurs de validation indiquées ci-dessous. Elles empêchent le site d'être entièrement conforme aux normes W3C. Le tableau ne contient que les 100 premières erreurs détectées.
- Ce site a été détecté comme étant HTML5.
- Une page du site analysé contient des éléments et/ou des attributs de présentation HTML. On considère généralement qu'il vaut mieux éviter les attributs de présentation HTML comme `` et `<p bgcolor="#FF0000">`.
 - ✎ Remplacez toutes les balises de présentation par leurs équivalents sémantiques. Chaque fois que c'est possible, utilisez la bonne sémantique HTML, puis des feuilles de styles CSS pour adopter le style approprié.
 - ✎ Supprimez tous les attributs de présentation. Utilisez les feuilles de style CSS pour toutes les instructions de style.
- Aucune des pages analysées n'est structurée à l'aide de tableaux. C'est un point positif: une telle mise en page ne s'impose pas et les tableaux devraient être réservés à la présentation de données en lignes et en colonnes. Un site bien construit doit reposer sur des éléments «div» et des feuilles de style CSS pour la mise en page.

Erreurs de validation W3C
