CANDLE

Presentation

We all already have faced the fear of a dazzling dump coming from nowhere in DEFI when we're not on screen or sometimes in just a few seconds

That's why, to fix this problem, our project is to create a DEFI trading platform which will allow you to use options like take profit, stop loss, limit order, contract sniping and even more.

Moreover, our token is innovating as it is the first token with fees that are automatically set by the contract and changing depending on the chart to increase pump and curb dump. Our token will also offer you rewards in Harmony \$ONE, the amount of rewards is changing and is totally drive by the contract depending on the chart.

CANDLE

Roadmap

- December 2021
 - Website release
 - Whitepaper release
 - Token launch
 - Firsts listing and CMS post
 - Community contest
 - Marketing
 - Development of trading options for the future platform
- January 2022
 - Website V2 release
 - Marketing
 - Audit
 - Listing CMC and CG
 - Beginning of platform development
- February 2022
 - Beginning of platform tests
 - Marketing
- March 2022
 - Intensification of marketing before platform launch
 - Platform launch

CANDLE

Candle smart contract

The contract which drive Candle Token have been totally made by our team in solidity language and will be first deployed on Binance Smart Chain as it is the most used Blockchain actually.

Contrat : XX

Contract deployment : xx/12/2021

CANDLE

Tokenomics

Tokenomics with smart fees

Volume:

Amount of buy and sell

Buy volume:

Proportion of buy volume in total volume

Sell volume:

Proportion of sell volume in total volume

Buy taxes:

It changes depending on buy volume (or sell volume). A function added to our contract allows it to have a precise fee for a given buy volume (or sell volume). The chosen model actually allow us to have :

for 0% buy volume : 0% buy fee
for 50% buy volume : 7.5 % buy fee
for 100% buy volume : 10% buy fee

Sell taxes :

It changes depending on buy volume (or sell volume). A function added to our contract allows it to have a precise fee for a given buy volume (or sell volume). The chosen model actually allow us to have :

for 0% buy volume : 25% sell fee
for 50% buy volume : 13% sell fee
for 100% buy volume : 9% sell fee

CANDLE

Taxes distribution :

The amount of token collected in the buy and sell fee is sent to a wallet. When someone makes a sale, if this wallet exceed a certain amount, then the wallet sell these tokens. The BNB collected due to these sale are distributed precisely (depending again on buy and sell volumes) between rewards, marketing and liquidity pool. The chosen model actually allow us to have :

for 0% buy volume :0% rewards | 60% Liquidity pool | 40% marketing

For 50% buy volume : 50% rewards | 20% Liquidity pool | 30% marketing

For 100% buy volume : 80% rewards | 10% Liquidity pool | 10% marketing

Taxes are evolutive in real time depending on buy and sell volume limiting or increasing some events such as panic sell or buy back after a dip.

Sell volume	Buy volume	Buy	Sell	Fees distribution				Buy fees distribution			Sell fees distribution

CANDLE

DEFI Trading platform

The trading platform we are creating will be first for Binance Smart chain users and will allow you to use options like take profit, stop loss, limit order, sniping contracts and even more. You will also be able to stack your tokens on this platform.

You will be able to have these functionalities by 2 ways. First you will be able to stack a certain amount of token, the more you will be stacking the more options you will be able to use. But you will also be able to use these options without having any Candle token by paying a fee (<1%) on every transaction using our options, depending on which one you choose to use.

The platform will be connected to Pancakeswap and will have charts and tools for technical analysis for every currency.

The platform will later be expanded on other Blockchain when the platform will be totally finished on BSC.
