Presentation

We all already have faced the fear of a dazzling dump coming from nowhere in DEFI when we're not on screen or sometimes in just a few seconds.

That's why, to fix this problem, our project is to create a DEFI trading platform which will allow you to use trading options like take profit, stop loss, limit order, contract sniping and even more.

Moreover, our token is innovating as it is the first token with fees that are automatically set by the contract and changing depending on the chart to increase pump and curb dump.

Our token will also offer you rewards in Harmony \$ONE, the amount of rewards is changing and is totally drive by the contract depending on the chart.

Roadmap

February / March 2022

- Website development ✓
- Whitepaper creation ✓
- Presale Launch (23/02/2022) ✓
- Beginning of CandleTrade ✓
- Token Launch (03/03/2022) ✓
- Firsts listings ✓

April 2022

- Platform design ✓
- Primary tests of CandleTrade platform ✓
- More marketing ✓
- Staking ✓
- Trade ✓
- Listing Livecoinwatch ✓

May 2022

- Bot ✓
- Dashboard ✓
- Finalization of CandleTrade Platform
- Intense Marketing
- Audit
- Listing CoinMarketCap and Coingecko

Candle Smart Contract

The contract which drive Candle Token have been totally made by our team in solidity language and will be first deployed on Binance Smart Chain as it is the most used Blockchain actually.

Contract Address :

0x17ad94E10DbCFFAF36C8112C805127cF2b83dD97

Contract deployment :

03/03/2022

Tokenomics

Volume :

Amount of buy and sell

Buy volume :

Proportion of buy volume in total volume

Sell volume :

Proportion of sell volume in total volume

Buy taxes :

It changes depending on buy volume (or sell volume).

A function added to our contract allows it to have a precise fee for a given buy volume (or sell volume). The chosen model actually allow us to have :

- for 0% buy volume : 0% buy fee
- for 50% buy volume : 7.5 % buy fee
- for 100% buy volume : 10% buy fee

Sell taxes :

It changes depending on buy volume (or sell volume).

A function added to our contract allows it to have a precise fee for a given buy volume (or sell volume). The chosen model actually allow us to have :

- for 0% buy volume : 25% sell fee
- for 50% buy volume : 13% sell fee
- for 100% buy volume : 9% sell fee

Taxes distribution :

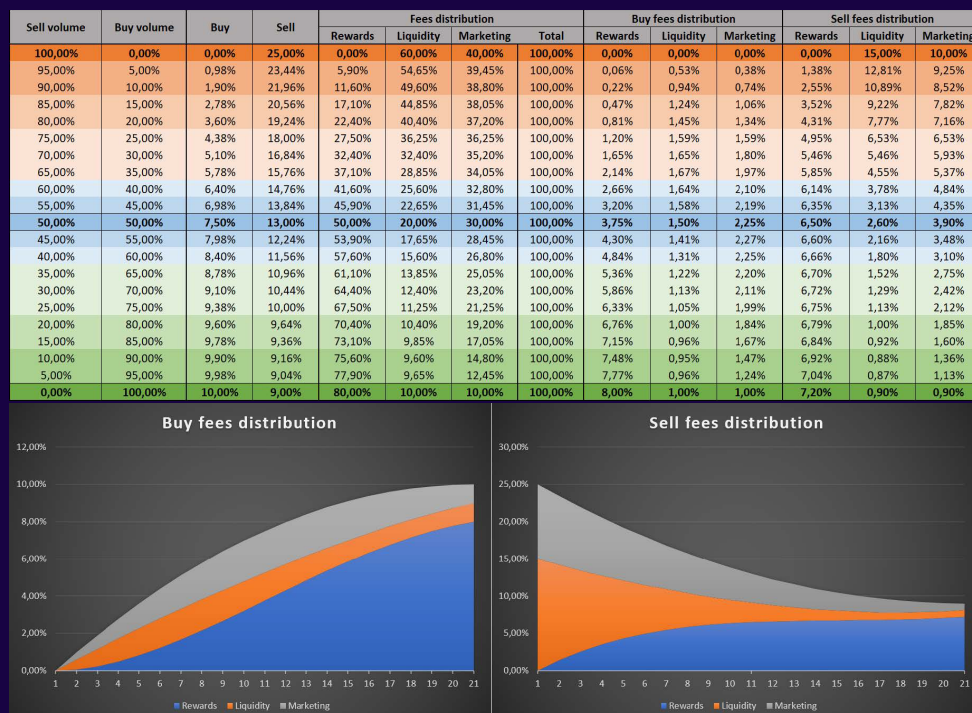

The amount of token collected in the buy and sell fee is sent to a wallet.

When someone makes a sale, if this wallet exceed a certain amount, then the wallet sell these tokens. The BNB collected due to these sale are distributed precisely (depending again on buy and sell volumes) between rewards, marketing and liquidity pool.

The chosen model actually allow us to have :

- for 0% buy volume :0% rewards | 60% Liquidity pool | 40% marketing
- for 50% buy volume : 50% rewards | 20% Liquidity pool | 30% marketing
- for 100% buy volume : 80% rewards | 10% Liquidity pool | 10% marketing

Taxes are evolutive in real time depending on buy and sell volume limiting or increasing some events such as panic sell or buy back after a dip.

Repartition

CandleTrade DEFI Trading Platform

The trading platform we are creating will be first for Binance Smart chain users and will allow you to use trading options like take profit, stop loss, limit order, sniping contracts and even more. You will also be able to stack your tokens on this platform .

You will be able to have these functionalities by 2 ways. First you will be able to stack a certain amount of token, the more you will be stacking the more trading options you will be able to use. But you will also be able to use these options without having any Candle token by paying a fee (<1%) on every transaction using our trading options, depending on which one you choose to use.

The platform will be connected to Pancakeswap and will have charts and tools for technical analysis for every currency.

The platform will later be expanded on other Blockchain when the platform will be totally finished on BSC.

Our platform, CandleTrade, of which we already develop some trading options and which are presented to you below will allow you to have better results on your investments thanks to our trading options :

- Take profit will allow you to specify a ceiling price, above this price your tokens will be sold at all or only a part depending on your choice.
- Stop loss will conversely allow you to specify a floor price, under this price your tokens will be sold at all or only a part depending on your choice.
- Limit order will allow you to specify a price below which your tokens will be bought.
- A bot will also be available on our platform and will allow you to do contract sniping in different situations (a function of contract scan will be made available to you in order to allow you to collect all the information you need to use our bot) :
 - In a token launch our bot will buy for you as soon as the liquidity will be added by the contract owner. The bot will also allow you to do it with multiple wallets at the same time
 - You will also have the possibilities to program the bot to sell before others when he'll detect a huge sell to come or a liquidity withdraw. It will allow you to avoid dumps and keep your portfolio safe.
- You will also have a Dashboard on our platform which will allow you to follow the growth of your investments in DEFI.

The list above isn't exhaustive, more trading options will be added and we will inform you when they'll be developed.
